GSM Alarm

Our GSM boat alarm integrates with you existing ship monitoring system. Simply connect the unit to general alarm output and you will receive a SMS on your phone when the alarm is triggered. You also receive a SMS when the alarm is acknowledged by a crew member. With 2 ON/OFF inputs, the alarm informs by SMS message of activation of each wired sensor.

We recommend a SIM card with unlimited SMS. Contact us for a quotation.

Video over CAT5

Our video over CAT5 adapters allow you to send video, audio and infrared signals over ethernet cable. This is a compact unit similar to an Ethernet hub. It performs the dual function of video/audio distribution from a Master device to multiple Slave devices, and of returning remote control information from the Slave devices to the Master. We have standalone and rack-mount systems with S-video and HDMI inputs.

Monitoring

Marinelec is pioneer in the design and development of network-based distributed-intelligence systems for vessels of all types and sizes. Their R&D team developed systems for the marine environment using time-proven state-of-the-art materials and techniques which will ensure a long life at sea. Designed and built under strict ISO-9000 quality standards, Marinelec provides an integrated approach to monitoring and control. We can supply simple stand alone monitoring equipment or fully integrated system automation. The modular technology allows for flexibility scalability, and simplified upgrades. Approved by some of the major Classification Societies, the network can be applied to any type of yacht. All ship data can be displayed on several workstation. The crew can access accurate information at any time. The system can also be interfaced with our GSM Alarm system.
